

RISE RS8

Meet the strongest, most versatile bollard in the industry

IN THE FIELD

Issue: Corrosion failures often start at the base where the setscrew shreds the paint in the threads.

Solution: Top-down, threaded rod secures the bollard in place with no visible hardware.

Issue: Site lighting often blankets illumination everywhere, with little control over light trespass.

Solution: Take control of light trespass with field-serviceable optics packages.

Issue: Bollards in public areas are often abused, leading to rocking or complete failure at the base.

Solution: The robust design of the Rise RS8 ensures increased strength at the base and throughout the luminaire.

IN THE DESIGN OFFICE

- Have confidence in your design with a robust luminaire engineered for top performance maximum longevity.
- Keep the design clean with no visible hardware.
- Hold specification with an up/down configuration.
- Field-serviceable optics packages allow for refinement after installation.
